External Modules External modules are AutoCAD plug-ins written in Modula-3 or Modula-2 or directly in C, and are based on a standard Automation Component Interface (ACI). C++ programmers can extend the AutoCAD system by writing a set of C++ classes that expose AutoCAD's functionality to the programmer. Examples of such classes are the Drawing and Sheet Setup object classes, the topology of the workspace classes, the layout object class, the dimension object class, and the viewport object class. AutoCAD's Python API, based on the ObjectARX project, allows programmers to manipulate drawing objects, and to automate operations on the drawing. The Python programming language is much less commonly used than Modula-2 or C, and is included in the AutoCAD 2010 and AutoCAD 2013 products. Usage AutoCAD can be used in both a command line interface and a graphical user interface (GUI). A command line interface (CLI) allows users to enter drawings via a

command line interface similar to the one used in Microsoft Windows (cmd) command prompt. A GUI-based AutoCAD uses a graphical interface to display and manipulate the drawing. History AutoCAD was originally developed by engineers working for AutoDesk, who were also responsible for the development of the PostScript Portable Document Format (PDF) and Type 1 and Type 3 fonts. It was also influenced by AutoCAD LT. Q: iOS - Define a percentage to a percentage? How do I set a percentage to a percentage value in XCode? I'm not talking about changing the label text, I mean actually setting the width of the view? Specifically, I have a view and I want to set it's width to 100% of the device screen width. A: Assuming you are trying to set a view's width: [view setFrame:CGRectMake(0,0,deviceWidth,deviceHeight)]; A: You can do this [myView setFrame:CGRectMake(0, 0, self.view.frame.size.width, self.view.frame.size.height)]; or [myView setFrame:CGRectMake(0, 0, (int)self.view.bounds.size.width, (int)self.view.bounds.size.height)]; or [myView setFrame:CGRectMake(0, 0, (int)(self.view.frame.size.width * myPercentage), (int)(self.view.frame.size.height * myPercentage))]; A: Create a view of 200x100px in the storyboard. Select the view and set the constraints from top and left to views and bottom and right to the superview. Add the view to the view controller scene. In the view controller add this - (void)viewDidLoad { [super viewDidLoad]; self.view.frame = CGRectMake(0, 0, 200, 100); } Now the view will fill the entire screen height and width.
