But his firing hasn't silenced him: Damore has been widely critical of his treatment by Google and has started a new company that has raised money. He's now suing Google for alleged gender discrimination. Damore is also supporting a friend's lawsuit against the company. The friend, David Gudeman, is a biologist who teaches at the University of Rochester. A GoFundMe campaign was started to pay for his lawsuit. His lawsuit argues that Damore was fired for expressing an opinion that was scientifically sound. In an interview, Gudeman says he believes Damore's firing was not supported by scientific evidence. He says Damore was a victim of a systemic bias within Google against conservative opinions. Damore's memo Damore was hired in 2010 at Google, and he worked on software for Google search. Then, in August 2017, he wrote an internal email titled "Google's Ideological Echo Chamber." It was circulated to more than 20,000 Google employees, including the vice president of people, David Drummond, and the senior vice president of global affairs, Daniel S. Shih. In the memo, Damore argued that the company's "ideological echo chamber" shows through in the diversity of the people who work at Google. He argued that "the factors leading people to be underrepresented at Google appear to include biological differences," and that the "Google organizational structure encourages behavior which are bad for the bottom line, like favoring high status boys over lower status boys." The memo concludes with a request for a "free speech alternative" that would allow all Google employees to express their opinions freely. He writes: "What I've described here is a conservative viewpoint. For example, I am skeptical of economic policies that are advocated by some who support the conservative movement
