Q: Local variable cannot have using alias With VS2015, when I try to use an using alias, I get the error message "Local variable cannot have using alias". I understand why this is - I'm not trying to use an alias on a local variable. However, I don't understand how to interpret that error message. If I were to think of it the way VS wants me to think of it, it sounds to me like I should be using the using statement on a local variable with using, or that I should be using it on a global variable with using. But both of these are clearly not what I'm trying to do, because I can use the using statements without any issues. What am I missing? EDIT: As asked, here is a minimal example of what I'm trying to do. using System; using System.Threading.Tasks; using System.Net.Http; namespace ConsoleApplication1 { class Program { public static async Task Main() { using (var httpClient = new HttpClient())
