Interoperability AutoCAD is developed in conjunction with AutoLISP, a high-level programming language. It is possible to develop AutoCAD extensions in AutoLISP, but there is no support for development in another programming language. AutoCAD has an API, which allows programmatic interaction with the drawing system and design objects. The API uses the AutoCAD ObjectARX library to provide robust object management. Many design applications support this API, or an AutoLISP interface to the API. These are: All existing applications which support the AutoLISP application programming interface (API) are also based on AutoLISP. The API is available on both Windows and macOS versions of AutoCAD. A language binding for the Windows API is also available. Design applications that support the API can use the API to control the design objects and commands and communicate directly with the system. An application can also read the design objects and use AutoCAD's other APIs, such as VBA,.NET and Visual LISP, to access information or control other parts of AutoCAD. AutoCAD has

been designed to interoperate with almost any design application that supports the API and is based on the LISP programming language. Design applications can access existing AutoCAD objects using the API. This allows other objects to be managed in the same way as those in AutoCAD. A design application can also use AutoCAD's DXF capability to import and export drawing information. Integration with other Autodesk products AutoCAD was originally integrated with Vectorworks. This was due to a legal dispute in the 1990s between Autodesk and Vectorworks. Vectorworks contended that Autodesk, by including the Vectorworks application in its software offerings, was giving a "free ride" to competitors who were "unjustly benefiting" from the work Vectorworks had done on its own. Autodesk withdrew from the agreement and withdrew AutoCAD from Vectorworks. BIM In 2011, Autodesk released BIM 360, the first iteration of a unified BIM (building information modeling) platform. It was designed to be flexible, open, and provide a consistent user interface and workflow across platforms and users. BIM 360 is designed to support BIM objects that describe the spatial layout of a building, whether a building is a single-story, multi-story a1d647c40b

Export to files and Web pages with AutoCAD and your browser. Export to a PDF or HTML file with the Export/web feature, and open the file on your Web page using a tool that displays the file in the browser. Use markups, such as comments and lines, to explain and document your drawing. Comments can be added from other AutoCAD programs or from external PDF files or Web pages. Add geometry to your drawing by dragging objects. Objects that are positioned outside of the current view can be dragged into the drawing area. Using the Expert tools, you can add a feature layer, replace layers, and define sections, among other features. Ensure quality with the ability to verify your drawings, add layers, and perform checks. Synchronize with users across the world through real-time remote collaboration. Create PDF-based drawings for professionals who want to use or exchange drawings. The design space has been upgraded to allow you to design complex space using a handful of commands. Draw angles with auto-rotation. You can automatically scale and rotate complex 3D shapes. Add and edit scales and work with multiple scales. Scale parts and separate them into multiple parts. Enhance the drawing canvas with new objects and tool palettes. You can add text, create text boxes, and edit text. Create a presentation slide deck with your drawings. Use an image-based legend for both documents and drawings. The Draw tool in the Drafting and Annotation toolbar has been redesigned. You can draw straight lines, curves, and more. New Feature Manager: Get new tools and features with the new Feature Manager. You can get new command properties, new tools, new items, and new files. You can find new tools and properties in the New feature panel that opens whenever you double-click on a feature. New Feature Manager menus: The Feature Manager now has its own menus that you can access by selecting Tools > New Features (default). The menus include an option to hide an old Feature Manager menu. The Settings
