More than seven years have passed since the start of the Bolivarian revolution, in April 2002. Since that time, the Movement has embarked on a path of socialism in the 21st Century, and we have witnessed a progressive transformation of the country and its people. Thanks to the achievements made by the Venezuelan people, the country now has a better economic, social, and human situation than at any point in its history. The Bolivarian Revolution has transformed the country, providing a better life for all its people, including the Afro-Venezuelans. Today, Afro-Venezuela is a country that has its own “dream” and its own “destiny”, which we must collectively fight for and improve. In Venezuela, we see the emergence of a new generation of Afro-Venezuelans who are revolutionaries. The youth of the Afro-Venezuelan community are the most revolutionary generation in the country’s history, and we are inspired by them. We see them carrying out tasks of permanent construction, generating change, contributing to the political, cultural, and social

transformation of the country, and showing us that a new Afro-Venezuela is emerging. At the same time, we are also aware of the racial discrimination and discrimination against Afro-Venezuelan people in the country, and we join them in denouncing this, because it is a crime against the people. The Bolivarian revolution in Venezuela has led to the construction of an Afro-Venezuelan identity, which we can only build with our collective efforts. This new Afro-Venezuelan identity is very important, because it gives us a shared reference, which we will use to fight against the most common enemies of our people: imperialism, racism, and white supremacy. The dream of a new Afro-Venezuelan generation is to see our people live in the country in a climate of peace, a1d647c40b

What's New In AutoCAD?

Markup Assist now includes the ability to send feedback in email with a link to the drawing, as well as attachments to a file.

New Quickly draw methods: Quickly draw long features with the autolayout method. Let AutoCAD find the best drawing edge automatically. The new Quickly Draw tool replaces the autolayout tool. The tool automatically determines the best edge to follow for the specified length and terminates drawing when the segment reaches the specified length. The tool also recognizes edge and arc endings that will be outside the drawing. The new Quickly Draw tool is designed to work with both the Go and the Continuous methods, so you can quickly draw without having to specify a particular method.

New extrusion methods: Extrude forms from an arc or circle. Extrude forms a linear segment. Extrude forms a circle from the current drawing. Extrude parts from a current extruded form. These features make it easy to generate a simple tapered form or a compound form with multiple parts.

New drawing camera improvements: Reduce the mouse clicks needed to take a picture. With the new Snap tool and new Snap Picture command, you can move your cursor to a point and take a picture with a single click. (video: 1:30 min.) The new Snap tool creates and displays a virtual frame around the area you select. The new Snap to Selection tool snaps to the selected object and then returns to the original cursor position. The new Snap Picture command creates a new picture with a single mouse click. You can also add drawing tools to a picture, use the picture as a filter for text or drawings, and customize the picture border with your own artwork.

Export templates from the Web browser: Add and manage your templates from the Web browser, and share your templates with others.

New ribbon enhancements: The Insert tab has been renamed to Drawing tab. The Modeling tab has been renamed to Shelf. The Home tab now includes the Form Properties menu.
