The latest version of Microsoft Office 2013 (32-bit), called Office 2013, can be easily downloaded from the official website (which is more than likely to provide you with the 32-bit software only. Even though the latest Office 2008 was released back in 2008, the 32-bit version of it is still considered as the new one, and therefore, the software is updated accordingly. Although many users have already opted for the 64-bit version of the MS Office suite, because of the compatibility issues that occur when you use the 64-bit application together with Office 2008, the 32-bit version is still the most common one in use. Just like the last version of Office 2012 (32-bit), this latest release of Office 2013, like all other versions, will be delivered in several editions. However, the most common ones are listed as Office Home & Student 2013, Office Home & Business 2013, Office Professional 2013, Office Client 2013, Office 365 for Mac 2013 and Office 365 for Windows (including Windows RT). Even though you'll be able to choose any one of these releases, the free version of Office 365 (for Home or Business) is the only one that you will be able to use with the Microsoft Office 2013. However, you can still get hold of the retail versions as well. The latest edition of Office 2013 (32-bit) can be downloaded for free at MS Office 2013 (32-bit) Key Features: With Office 2013 (32-bit), you'll be able to familiarize yourself with the new user interface in the latest Office suite. Compared to the previous release, Office 2013 has been a huge improvement, as it employs a completely different look and feel, whereas the previous editions adopted the ribbon-based menus from Office 2007. There are several ways to open the menus in Office 2013, including the use of the Alt+Key combination, but as an alternative, you'll be able to see the sub-menus in the menus by clicking once on the tabs on the top-right corner of the window. You can always see the available menu options by clicking on the

Some of its notable features include: • Drag and drop support • Drag and drop support • Resume interrupted transfers • Transfer multiple files simultaneously • Upload multiple files in a single click • Upload multiple files in a single click • Self-signed certificates • Multiple FTP sites support What is it? FileZilla is a free and open source FTP software application developed by the team behind the popular Open Source FTP client, ProFTPD. The application is available for Windows, Linux and Mac platforms. It can be used to download files from FTP servers as well as uploading files from a local directory. How is it different from other FTP programs? FileZilla differs from other FTP clients in a few ways. It supports multiple FTP sites, and makes it easy to save the connection settings for such sites. It offers a handy “multi-connection” mode for storing connection settings. It also has support for connections to self-signed certificates, which makes it easier to connect to servers that use a self-signed certificate. How to Use it? Download and install the FileZilla software on your PC. Now that it's installed, launch it and sign in with your FTP credentials. Click on the “File” menu and select “Add FTP Server”. Enter the URL of the FTP server on which you want to connect. Select the FTP user and password if needed. Then click on the “Connect” button. It should take only a few seconds to connect. [...]Q: Errors writing data to a file I am trying to write some data to a file using this code. file = open("testfile.txt", 'r') data = file.read() file.close() print "Open, data: " + data file = open("testfile.txt", 'w') file.write(data) file.close() print "Save, data: " + data When I run it, I get this error: Open, data: chr(34)Nopyright Traceback (most recent call last): File "C:\Users\...\documents\code\test.py", line 2, in file.write(data) File "C:\Users\...\AppData\Local\Programs\Python\Python36\lib\codecs.py", line 655, in write self._write(data) UnicodeEncodeError: 'ascii' codec can't encode character u'\xe2' in position 4: ordinal not in range(128) I have been trying to find the source of the error for the past day, but I still have no idea how to fix it. A: The problem is the data variable is not holding the right kind of data. It is a string and the line file.write(data) is trying to write a Unicode string to the file and that is not the same as a ASCII string, hence the error message. Try this to fix it: file = open("testfile.txt", 'r') data = file.read() file.close() print "Open, data: " + str(data) file = open("testfile.txt", 'w') file.write(str(data)) file.close() print "Save, data: " + str(data) Or even better: import codecs file = open("testfile.txt", 'r') data = file.read() file.close() print "Open, data: " + codecs.decode(data) file = open("testfile.txt", 'w') file.write(codecs.encode(data)) file.close() print "Save, data: " + codecs.decode(data) This will fix the error and you won't have to write and read the data twice. The conventional wisdom is that the soaring interest rate for US banks is caused by a number of factors, including a shortfall in credit supply, increasing regulatory burdens, and a growing appetite by the Fed to use its bond-buying program to influence long-
