other financial institutions,  
are required to ensure that a  
minimum level of customer  
service is provided to every  
account holder. In many  
cases, financial institutions

---

ensure the proper service of customer accounts by monitoring the accounts of their customers through automated or manual monitoring systems. A “service level” is one measure that may be utilized to assess whether an account is properly serviced. A service level is typically a percentage that is adjusted over time. As an example, a bank may maintain a service level to be 100%, but allow for an adjustment of 2% to allow for some attrition of

---

customer accounts due to, for example, a change of address, a change in account number, etc. A threshold may also be utilized as

date

What's New in the?

The Persian Date tools  
for.Net framework 2.0 is a  
SqlData provider or a  
registry key provider. You  
can convert any date from  
Gregorian date to Persian  
and Hijri date. You can also

---

convert it to custom date format. It is the best Persian Date control, with Persian date format. It has easy to use and full of useful features. It is very flexible. Just in case that you have problems using this date control please send your questions to “support@odoo.com”

Become a Sponsor Odoo has published a new “Better” series of videos. Each video will showcase good ideas that you can get started with today, along

---

with a supporting blog post. The first video is: “How to Succeed Using Odoo.” You will learn some tips about Odoo from the Vendor who has experience on selling internationally. Some of the subjects that will be covered are: how to generate invoices and get paid, how to use the credit card feature and more. The videos are moderated and have been approved by the team. All videos are accompanied by blog posts and polls. One of the most important

---

workflows for any Odoo partner is the return of invoices. This is the place where a large percentage of your income is generated, so you want your business to be as efficient as possible. The data to be processed for invoices (lines) is in the product (invoice) model, but the processing logic for that information requires the work of your business partner within a form view. The Invoices module allows you to enter information about your company, get a

---

view of your data, generate invoices and post the invoice automatically, send the invoice via email and receive a paper invoice, and much more. While processing your data, Odoo's application has two main workflows: continuous processing in the background, and display of the necessary views for interacting with data and knowing the results. The processing of the same workflow can be performed in several places, for

---

example: Continuous process: This is the process of generating, processing and adding a new invoice at the time, being saved automatically in the background. Workflows: A workflow is the process of generating a new invoice. To generate a new invoice, two actions must be performed: Add new line: This operation is performed in a form view called

---

**System Requirements:**

Minimum: OS: Windows 7,  
Windows 8, Windows 10

Processor: Intel Core 2 Duo  
@ 2.4 GHz Memory: 2 GB

RAM Graphics: 128 MB

VRAM Network:

Broadband Internet

connection Hard Drive: 1

GB available space Sound

Card: DirectX 9.0

compatible sound card

Additional Notes: For best  
performance, we

recommend at least a dual-

core processor with 3 GB of

---

# RAM. Maximum:
