“There’s a lot of complexity,” Scott said. “The user interface is very much a visual interface. It’s very low tech.” He smiled at the image. “All of these are directed by a mouse. But what it does, it does really, really well.” According to Scott, the desktop AutoCAD is based on a graphics system originally developed for Xerox’s 1980s laser printing system. The low-tech mouse is based on the method used to move the cursor on the page of a Xerox laser printer. The mouse is in the middle of the desk and the operator can place it wherever he or she desires. An earlier version of AutoCAD used the LISA Mouse (Low-Input Scanning and Automation) that connected to a serial port on a computer. The LISA Mouse is no longer supported by Autodesk. “When we got into production, we needed to be able to do very fast prototyping and very fast shipping,” Scott said. “We thought it was essential to keep the design a black box. The user interface, the low-tech interface had to be kept a black box and we couldn’t have the user interface evolve over time. We really had no choice but to go with what was basically a Xerox laser printer graphics system. We think it’s a pretty good system. It’s one of the oldest. It’s pretty robust. It’s very reliable. It’s not super sophisticated, but what it does, it does really well.” AutoCAD features a lot of technology that was not used during its early years. “When you look at the product line of AutoCAD, it’s a system that evolves,” Scott said. “It evolved over the years. It’s a modular system where you can buy in modules that you want as you need them. So, you can pick and choose what you want in terms of the number of people you want to deploy and what you want to deploy them in terms of the modules you want to have.” A Simple User Interface The simple user interface of AutoCAD enables operators to work through the interface quickly. In addition, with a single window of controls, commands for drawing, modifying, annotating, printing, emailing, and archiving drawings are easily accessible. A mouse with any of the “side buttons” enables operators to execute commands quickly.

AutoCAD is the de facto standard for architects, engineers and drafters of technical drawing information, and is popular with engineers in the oil and gas industries and construction. As with the PC, AutoCAD is available for the following platforms: Windows, macOS, and Linux. The Republican-led House of Representatives on Tuesday unanimously passed a resolution stating that the conflict was a “noble goal” and that “unnecessary civilian and military casualties were regrettable,” but not a “failure.” Rep. Mac Thornberry, R-Texas, the chairman of the House Armed Services Committee, described the vote as an “opportunity to celebrate the events of our history, especially our military efforts in Iraq, but also to reflect on where we are today.” “It’s an opportunity to remember the strength of our nation in standing together in times of trial, and the importance of what we do when the chips are down,” he said. But Democrats have taken a different view, saying the war has been a failure for American troops and Iraqi civilians alike. “I think it’s a sad day,” Rep. Jim McGovern, D-Mass., said during a debate on the resolution. “I think the war in Iraq has been a mistake from the beginning.” Republicans have long favored preserving the Iraq War legacy, especially the troop surge that began in 2007 under then-President George W. Bush, and which was credited for ending the terrorist insurgency. The House also overwhelmingly approved a resolution by Rep. Ileana Ros-Lehtinen, R-Fla., to authorize the deployment of an additional 400 U.S. troops to Afghanistan. She said the legislation was needed to prevent the Taliban from regrouping after U.S. and NATO forces recently conducted an offensive against militants in southern Afghanistan. The Senate is currently debating a version of the bill, which includes an amendment allowing U.S. troops to be deployed to Iraq. Senate Majority Leader Harry 5b5f913d15
