Note The term _layer_ is commonly used in graphic design and graphic arts applications to refer to separate pieces of content on a page, illustration, or in a document. A single image can be composed of many layers. (Illustration by Steve Mann.) Figure 7-2. Layers enable you to group a series of images into a single file. You can also manipulate or reshape layers. In Figure 7-2, you can see the same image I used in Figure 7-1. You can see that instead of a single image, this image comprises a number of layers. You can also see that I have manipulated all of the objects in the layers. In this section, I'll show you how to create, name, group, and manipulate layers. Creating, naming, and manipulating layers is almost identical in Photoshop and other graphic design applications, such as Adobe Illustrator. The only major difference is the structure of Photoshop's interface.

What's New In?

Most of the metadata provided by the Microsoft Technical Support Center (MTSC) only reflects the current status of a machine. MTSC has the potential to grow into a comprehensive source of machine information about a lot more than just devices and servers. MTSC already provides information about this machine and is now getting ready to deliver new metadata types that relate to the application you are using. If you're using this application, you should consider using this new type of metadata. For more information about metadata, see TechNet's Knowledge Base article "What's New in Metadata for Windows Server 2008 R2." Microsoft SharePoint Server 2010 supports a number of new business scenarios, such as delegating permissions to groups, viewing group permissions, and synchronizing group memberships. If you're not sure how SharePoint has changed to support these scenarios, check the following TechNet articles: "How to: Set Memberships for Groups and Users in SharePoint 2010," "How to: View Permissions by Groups in SharePoint 2010," and "How to: Create and Send Email Notifications from SharePoint 2010." If you're still looking for permission to send email messages and other notification messages on behalf of users in a SharePoint group, this article should help you get started. Most SharePoint 2010 pages include a Welcome User panel, which gives users access to the page without requesting permissions. You can include this panel on a page, or you can embed a Welcome User panel in a new SharePoint 2010 page. If you embedded the panel, users are prompted to provide permission to the new page before they can view it. SharePoint has long supported settings in the General Settings section, which affects most of the site configurations. There's been a section for site-collection settings for the past few releases of SharePoint. Starting with Microsoft SharePoint Server 2010, you can apply settings to all sites in a site collection, instead of only the individual site. If you're using SharePoint 2007, you're probably familiar with the Site Settings dialog box. SharePoint 2010 includes this functionality in the Site Actions menu. The site settings dialog box uses a new user experience, with a ribbon for most actions. It also has some new functionality: it lets you work with multiple sites at a time, it allows for better integration with Outlook, and it lets you use the
