### Screen Capture Professional Edition (2022)

After a brief and uneventful installation procedure, you are greeted by a standard window with a plain layout, where a short help file explains every step of the process. You can change the default output directory and format (JPG or BMP), establish a counter for frames, as well as insert a base name for all saved snapshots. From this point on, you can minimize Screen Capture Professional Edition to the taskbar or system tray area. Henceforth, you can press the Printscreen key on your keyboard, which triggers the automatic save of each new frame. There's also an option available that lets you capture only the frame of the foreground active window, as long as you hold down the Alt key when pressing the Printscreen key. It is also possible to set the program to automatically run at system startup and to minimize to the system tray at app initialization, assign a sound for each shot-grabbing event, convert BMPs to JPGs, open Display Properties, to change desktop wallpaper options, as well as to restore all screen capture settings to their default values. Screen Capture Professional Edition runs on a very low quantity of CPU and system memory, has a good response time and works well, without hanging, crashing or popping up error dialogs. On the downside, it does not integrate a feature for capturing an area of the screen, and you cannot reconfigure keyboard shortcuts. We must also take into account the fact that Screen Capture Professional Edition has not been updated for a very long time. Well-Known Member In Ite's Polish review he said it works, but will not do what it was intended to do. It has been out of production (with no updates in over 3 years) for a long time, it will not do what it does not allow you to do. I used Ite's Polish for over 3 years....spent all kinds of time with it, to use it for what it was intended to do..screen capture. It would not capture a window, a taskbar, a hotkey, a Dialog Box, nothing. No matter what, no matter which key I pressed, it just did not work. It would not accept ANY settings at all from anything I changed in System Settings, not taskbars, not keyboard shortcuts, not anything. Just flat out would not work... I am not sure this version of Ite's Polish will do what Ite's Polish was intended to do. It still needs to be updated

How to send your file from your phone or camera to your computer with a Bluetooth connection via Windows 10 In this tutorial I will show you a simple way to transfer a file from your phone or camera to your computer (via Windows 10). There are many ways to get the files from a smartphone (for example via Google Drive) but I do want to recommend a simpler way to get the files. What I will describe in this tutorial is not new and is still working as it should. Theory behind this approach There are two ways to access a Bluetooth connection: beacons or Basic Authentication. Beacons are used to find nearby devices and devices use Basic Authentication to connect to each other. In this tutorial I use Basic Authentication which is a much more secure way of connecting but with beacons you can easily detect the device. We will use the latter: Basic Authentication. The process is simple: We use the Bluetooth (optional) app in Windows 10 to browse the devices and find the phone or camera. On the phone or camera we need to browse the Bluetooth settings and select to authorize connection requests. At this point the computer 09e8f5149f
