Professional.Q: Codeigniter 3 - Formatting

a date string Does anyone know if the

date formatter class has been changed in

Codeigniter 3? I can't find anything in the

docs, but I have been unable to find

anything about it. I'm currently using Codeigniter version 3.0.2, which is when I was created the project, so I don't know if something's been changed in the last two years. I'm not particularly familiar with the code, so I don't know if there is a reason why I don't see this feature. I have a model that takes date as a string and saves it in a database. The date string is in the following format dd/MM/yyyy. Since I use the date formatter class, I get this error message: A PHP Error was encountered Severity: 8 Message: date_format() expects parameter 1 to be string, object given Filename: date_api/functions.php The model is written in the following way:

```
$date_obj = date_create_from_format('d/m/Y', $request->data['date'], $this->config->item('date_format')); $data['date'] = date_
```
