* To view the Photoshop tutorials, search "Photoshop online" on Google, and you will find videos with all the buttons, filters, and effects you'll want to know how to use. * You can download those free lessons through Adobe's website at www.adobe.com/photoshop. In the following sections, we cover the many tools you'll need for any type of photography. First, though, we cover the essentials of Photoshop: the layers and adjustment layers. ## Creating Layers A `_layer_` allows you to apply an image as a background, foreground, or overlay. You can add transparency on the layers by setting their mode. If you check the box next to a layer, it appears in the Layers panel (as shown in Figure 11-3). Just double-click on a layer to bring it into view, and move, resize, or change an image as long as you can manage with the transparency. On the other hand, if you double-click on a layer with a selection, it's a selectable object that you can move, resize, or change as long as you can manage the transparency.

Here's where the global sugar rush went wrong 10:28 pm June 21, 2010| The Group of 20 said Wednesday that its richest members should not be given any special treatment, even as they face pressure to do more to curb the effects of this year's global sugar rush. Photo by Associated Press /Times Free Press. The G20 has grown rich as much of the rest of the world has gone broke, as the global sugar binge has been felt. Now the world has a global sugar problem, with stocks at all-time highs for the sweet stuff. It's a bit like the bursting of a housing bubble. We were warned time and again of the dangers that can be undertaken to sustain unsustainable growth. Government deficit spending, as in the United States and other economies, and the development of a "shadow banking system" that purportedly provides a different kind of credit, are dangerous. We had a warning in the 1990s about profligate domestic spending, and by 2005 we had a warning about the growth of "shadow banking" and the risks of systemic risks. We were warned about the dangers of debts that could not be repaid. We should have listened. Instead, we gave the Greens no chance when they took a stand about the need to adopt a value-added tax. When the G20 finally worked up the courage to actually try and tax carbon, it was too little, too late. So it's pretty clear that we didn't listen to the warnings. Now, though, we have a problem. There's too much sugar, too much processed food, too much of everything. We are told we are going to have to change. But that doesn't work in a world that has been so thoroughly reformed. In the United States, when you look at the inevitable rise in rates to 44 or 45 percent, you see the equivalent of a return to the high rates of the 1960s. These were high rates, say economists, because they encouraged corporations to save money and invest it in business, which allowed for investment in new plants and equipment. The higher rates stimulated business investment, which allowed for investment in new plants and equipment. Why don't we remember that history? Why don't we remember that we used to have health food stores and farmers markets? It's not so much that they failed, as that things were just different. There's a little bit of that going on with the

Edmund Wilson's famous essay on Zelda Fitzgerald was published in the December 1950 issue of Horizon magazine. It is often cited by literary critics as an example of the popular essay of the 1950's. It has been reprinted several times since. This passage is from the excellent introduction by Kevin J. Hayes: "Miss Nancy Woodford was a middle-aged spinster who lived in an upper-middle-class suburb of Springfield, Massachusetts. She shared a house with her niece, Miss Zelda Fitzgerald, the novelist, who was receiving \$1,250 a month and was about to publish her second novel, *The Last Tycoon*. Miss Woodford, who was there to pick up some books from a bootlegger, walked in upon the party. I guess it's no exaggeration to say that what happened next was history. Miss Fitzgerald became a female heroine who lifted her skirts to reveal bare legs, and danced round and round the room while Miss Woodford spun helplessly. And Miss Woodford, who might have been a spinster herself had her career as a cellist not been torpedoed by a second-class surgeon at City Hospital, became suddenly famous and rich. 'Heavens alive,' she said when this happened, and I knew she was talking about money, 'I always knew something like this would happen.' It is odd to think that there might be a million women in America and only one of them, Miss Woodford, might be interesting. But it seemed not to matter. She was in the United States after all, and the odds were against her. Even so, she made her own mark. After all, once you hear about a new party, you never forget it."Several of the regular contributors on the WUWT comment threads (Sigmon, Boxus, Ram, et al.) enjoy discussing the National Weather Service's (NWS) current forecasting accuracy. Of course, no method, including the NWS forecast models, can ever accurately predict the weather to the maximum extent. Even the best can be subject to errors in the data. But, none of that matters to the WUWT commentariat, as can be seen in this thread, where the participants essentially ignore the fundamental nature of the problem. The United States has long been the world's most advanced and complete reporting country in terms of weather data collection. In terms of reporting, the U.S. has also been the most advanced in terms of the instrument
