Is there a way to make the debug dll and pdb's to be placed in the bin/debug folder? I'm using the default source path to publish the project. A: You need to add the files to the project. To do so, right click on the project, select properties and then the "Application" tab. Click on the "Browse" button to navigate to the folder containing the dlls and pdbs. You may also want to look at the "Build Events" button. That's where the Properties/Configuration manager used during a build are configured. Q: Why did the mirror of Vidia on the right side of Moya disappear? Near the end of episode six of the second season of the TV show 'Farscape', Vidia began to talk through a crack in her mirror: This crack in the mirror became the central focus of the episode, culminating in this: Why did Moya's mirror on the right side of the saucer disappear in the first place, and why did it reappear after the mirror of Vidia disappeared, and why did it not reappear after the Vidian plague was cured? A: Originally, the two mirrors were used to show the viewer how the internal workings of the ship worked. The first one showed the view from the comm tower, and how we couldn't see the back of the ship. The second mirror was used when someone was asked how to operate the maneuvering thrusters, and the crew would point at their respective mirror. In Season 3, the maneuvering thrusters have been modified. A new system of maneuvering thrusters has been installed aboard Moya's saucers, which are controlled by a liquid-crystal display and a motor. So we probably didn't need the mirror anymore.
