Story of the Lands Between, the Brand new fantasy tale

The story takes place in the Lands Between, an ideal, enlightened world that is generally separated from the real world. Seeing its wealth of harvests, bravely wandering knights and splendid cathedrals, the Lands Between has become a land in which the weary warrior is more than ever called home. Yet there is a great imbalance in wealth. Traditional kingdoms, wealthy in the metal and spices they trade, have spread like a barren desert across the Land Between. After the golden age of civilization was wiped out by the great war and barbarian incursion of ancient times, some parts of the vast world fell into complete desolation, and now lie mostly under the storied Cloud of Snow.

Rich Equipment and Magic

As one of the chosen, an heir to a kingdom loaded with both riches and guarded by powerful legendary weapons, take up arms to increase your strength. Adorn yourself with eccentric armor and use powerful magical equipment to become a mighty warrior!

Exciting Battling System and Optional Multiplayer

The game is set up to be the definitive fantasy RPG action game by combining exciting combat with a social network element. The game is able to play your words and resolve battles by utilizing an asynchronous multiplayer system that allows you to match up with friends. While you play in single player, you can battle against powerful bosses in dungeons with a revolutionary battle system that makes the duty of dungeon troving feel like a brand new RPG.

IT'S TIME TO BECOME THE GOD! In order to select an appropriate Elden Lord, you will need to set your Intimidate skill to a certain level and be able to commit yourself to our contract. Then you will be invited to the Hestia Stone Court to start the trial. But you must understand that you will become an Elden Lord to be at the fore of all the Elden Lords, with a responsibility and on the shoulders of a great power. That's why our contract is so strict: instead of granting you a special ability, or an oath making the other trial candidates unable to summon an Avatar, you will need to commit yourself and acknowledge the true purpose of the game.

KILL ANYTHING WITH ANYTHING! Don't hesitate to try out all the weapons you might have stored up at home. Among them, it's certain you have received plenty of advice regarding the best offensive skills. Take a chance, and use the skills you think will be most effective to make your target tremble. Be careful about their use, and choose the items necessary to the scenario you are going to enter!

At the center of a digital camera is a charge-coupled device (CCD) image sensor. A CCD image sensor contains an array of microscopic light-sensitive cells that converts photons into electrons. In recent years, complementary metal oxide semiconductor (CMOS) image sensors (or "CIS") have also been used to capture image information. A CIS image sensor is typically made up of an array of active pixel sensors (APS). Not all image sensors can handle all types of image capture. For example, CMOS sensors have a significantly larger dynamic range than CCD sensors. A capture dynamic range is the range of light intensities that a capture device can handle. A CCD sensor has a linear relationship between its sensitivity and the number of electrons it collects per unit of time. A CCD image sensor also generates a fixed amount of electrical charge, regardless of the number of photons that have struck it. In order to image scenes with a wide dynamic range using the typical CCD image sensor, three separate exposures may be required. In the first exposure, the scene is exposed to light to capture only the brightest pixels. A second exposure is used to capture pixels that are a little darker than the brightest. A third exposure is used to capture pixels that are darker still, corresponding to a typical "daylight" scene. When a capture device captures such a scene, it may generate a final electronic image having significantly more pixels than are visible to the human eye. A typical image sensor generates an array of pixels that each store a single pixel in the
